AHC Rehab

Results-oriented: In order to ensure the best outcomes, we measure how much each patient has improved each day. Our patients' daily improvement is among the highest in the region.

34% higher daily improvement than the average regional patient

Personalized: We treated patients ranging from 21 to 100 years of age in our stroke program, with the average being 69 years of age.

Compassionate: Our patients consistently report positive satisfaction ratings about our hospital and care to an independent auditor.

Customized: Our patients receive intensive rehabilitation therapy. Our stroke program patients on average participated in 16.7 hours of therapy a week.

Successful: More than 71 percent of our patients returned to their home after leaving our hospital.

Some patients' needs were best met by other support, including care in an acute-care hospital or in a skilled nursing facility.
